
EON SSH + Tethering

— Using IOS or Android:) —

By @cmma

Install Termius since it's crossplatform:)

If you are using Android, JuiceSSH is way better.

Open the Termius

Click on
menu to
find
Keychain.

Click on + to add private key.

You can either paste the key or Import key.

Following is key to paste.

```
-----BEGIN PRIVATE KEY----- MIIEvAIBADANBgkqhkiG9w0BAQEFAASCBywggSiAgEAAoIBAQC+iXXq30Tq+J5N

Terminal Basic/12

Charset

UTF-8

Telnet

SSH Screen once logged in

```
ECDSA key fingerprint is SHA256:5pezHRu3R3E80zoS4dwhHBlWJX3v8EbjBq90zpCCEE.  
Are you sure you want to continue connecting (yes/no)? yes  
Warning: Permanently added '[10.8.83.22]:8022' (ECDSA) to the list of known hosts.  
root@localhost:/system/comma/home$
```

Use Tethering from your Android without Root:)

Download Netshare full version from following link. After it's installed use, Use start WiFi Hotspot then on EON connect to wifi however it will say it's connected but it will be local. After that you have enter the proxy settings manually not automatic since it won't working where on local host you will enter the following IP address 192.168.49.1 and port 8282 and boom now you have EON connected on the line:)

Use EON as Local Network just for SSH

- Settings gear
- Network
- Open Tethering Settings
- Toggle Portable Wi-Fi hotspot
- If you want to have custom network name you can click on setup Wi-Fi hotspot first.
- Now just login using ssh using default IP of EON which is as shown on above slides.

192.168.1.100 and port 8022

Use AIO script for custom branch

```
cd /data && rm -rf openpilot* && git clone  
https://github.com/username/openpilot && cd openpilot && git checkout  
branchname && reboot
```

Example

```
cd /data && rm -rf openpilot* && git clone  
https://github.com/ghostriding/openpilot && cd openpilot && git checkout  
alca_056_pedal_screenoff && reboot
```
